# FEMTO D4 <br> INSTALLATION GUIDE 

## COPYRIGHT

Electrex is a trademark of Akse S.r.l. All rights reserved.
It is forbidden to duplicate, adapt, transcript this document without Akse written authorization, except when regulated accordingly by the Copyright Laws.

## WARRANTY

This product is covered by a warranty against material and manufacturing defects for a 24 months period from the manufacturing date.
The warranty does not cover the defects that are due to:

- Negligent and improper use
- Failures caused by atmospheric hazards
- Acts of vandalism
- Wear out of materials
- Firmware upgrades

Akse reserves the right, at its discretion, to repair or substitute the faulty products
The warranty is not applicable to the products that will result defective in consequence of a negligent and improper use or an operating procedure not contemplated in this manual.

## RETURN AND REPAIR FORMALITIES

Akse accepts the return of instruments for repair only when authorized in advance. The transport costs are at customer charge.

## RE-SHIPPING OF REPAIRED PRODUCT

The terms for re-shipment of repaired products are ex-works, i.e. the transport costs are at customer charge.
Products returned as detective but found to be perfectly working by our laboratories, will be charged a flat fee to account for checking and testing time irrespective of the warranty terms.

## SAFETY

This instrument was manufactured and tested in compliance with IEC 61010-1 CAT III 300 V class 2 standards for operating voltages up to 300 VAC rms phase to neutral. In order to maintain this condition and to ensure safe operation, the user must comply with the indications and markings contained in the following instructions:

- When the instrument is received, before starting its installation, check that it is intact and no damage occurred during transport.
- Before mounting, ensure that the instrument operating voltages and the mains voltage are compatible then proceed with the installation.
- The instrument power supply needs no earth connection.
- The instrument is not equipped with a power supply fuse; a suitable external protection fuse must be foreseen by the contractor.
Maintenance and/or repair must be carried out only by qualified, authorized personnel
- If there is ever the suspicion that safe operation is no longer possible, the instrument must be taken out of service and precautions taken against its accidental use.
Operation is no longer safe when:
-There is clearly visible damaged
-The instrument no longer functions.
-After lengthy storage in unfavorable conditions.
- After serious damage occurred during transport

The instruments must be installed in respect of all the local regulations.
OPERATOR SAFETY
Warning: Failure to observe the following instructions may lead to a serious danger of death.

- During normal operation dangerous voltages can occur on instrument terminals and on voltage and current transformers. Energized voltage and current transformers may generate lethal voltages. Follow carefully the standard safety precautions while carrying out any installation or service operation
- The terminals of the instrument must not be accessible by the user after the installation. The user should only be allowed to access the instrument front panel where the display is located.
- Do not use the digital outputs for protection functions nor for power limitation functions. The instrument is suitable only for secondary protection functions.
- The instrument must be protected by a breaking device capable of interrupting both the power supply and the measurement terminals. It must be easily reachable by the operator and well identified as instrument cut-off device.
- The instrument and its connections must be carefully protected against short-circuit.

Precautions: Failure to respect the following instructions may irreversibly damage to the instrument.

- The outputs and the options operate at low voltage level; they cannot be powered by any unspecified external voltage.
- The application of currents not compatible with the current inputs levels will damage to the instrument.

Further documentation may be downloaded from our web site www.electrex.it.

## DECLARATION OF CONFORMITY

Akse hereby declares that its range of products complies with the following directives EMC 2014/30/EU, 2014/35/EU and complies with the following product's standard CEI EN 61326 - Ed. 2.0 (2012) - IEC 61326 - Ed. 2.0 (2012), CEI EN 61010- Ed. 3 (2010) - IEC 61010- Ed. 3 (2010). The product has been tested in the typical wiring configuration and with peripherals conforming to the EMC directive and the LV directive.

## READINGS

| 3P3W | 2 phases 3 wires | Triangle |
| NOTE n. 2 |  |  |
| POWERS | Integration time of the average value (AVG) and peak value (MD) for power (from 1 to 60 minutes) |  |
| CURRENTS | Integration time of the average value (AVG) and peak value (MD) for current (from 1 to 60 minutes) |  |
| NOTE n. 3 |  |  |
| NORMAL | Classic Alarm with reference to a fixed threshold or to maximum and minimum delay and applicable hysteresis. "AVG" parameter is not used. |  |
| UNBAL\% | Considers also the 2 following registers of the selected one in "MEAS". "THRE" parameter becomes a \% value. Alarm goes on when one of the three register is different from the percentage set on "THRE" comply with the higher value of the three read register if "MAX" is set on "TYPE", or comply with the lower value of the three register if "MIN" is set on "TYPE" With delay and applicable hysteresis. |  |
| UNBAL | Considers also the 2 following registers of the selected one in "MEAS". "THRE" parameter becomes a ???? value. Alarm goes on when one of the three register is different from the percentage set on "THRE" comply with the higher value of the three read register if "MAX" is set on "TYPE", or comply with the lower value of the three register if "MIN" is set on "TYPE" With delay and applicable hysteresis. |  |
| 3-OF-3 | Considers also the 2 following registers of the selected one in "MEAS". Works on a fixed max or min threshold with delay and applicable hysteresis. When all the three register exceed the threshold the alarm goes on. "AVG" parameter is not used. |  |
| 1-OF-3 | Consider also the 2 following registers of the selected one in "MEAS". Works on a fixed max or min threshold with delay and applicable hysteresis. If one of the three register exceed the threshold the alarm goes on. "AVG" parameter is not used. |  |
| NOTE n. 4 |  |  |
| MAX | Alarm setting in excess compared with the established conditions. With the exception of "UNBAL and UNBAL\%". |  |
| MIN | Alarm setting in decrease compared with the established conditions. With the exception of "UNBAL and UNBAL\%" |  |
| NOTE n. 5 |  |  |
| MEAS | Indicates which register (measure) the alarm is related to. See table n. 1 input register. |  |
| THRE | Alarm threshold in absolute value, with the exception made for "DERIV" and "UNBAL" in which the value inserted becomes a percentage. |  |
| NOTE n. 6 |  |  |
| NORMAL | Alarm remains active during the duration of the event. It restores automatically. |  |
| HOLD | Alarm remains active until the manual reset via Modbus. |  |
| NOTE n. 7 |  |  |
| ALARM 1 | MODBUS Alarm (Related to output 1 if present) |  |
| ALARM 2 | MODBUS Alarm (Related to output 2 if present) |  |
| ALARM 3 | MODBUS Alarm (Related to output 3 if present) |  |
| ALARM 4 | MODBUS Alarm (Related to output 4 if present) |  |
| NOTE n. 8 |  |  |
| LED-1 | OFF | LED remains OFF |
|  | S0-1, 2, 3, 4 | LED blinks following the pulse generator selected |
| NOTE n .9 |  |  |
| EA | Power (Energy) Imported/Exported Active |  |
| ER L | Power (Energy) Imported/Exported Reactive Inductive |  |
| ER C | Power (Energy) Imported/Exported Reactive Capacitive |  |
| ES | Power (Energy) Imported/Exported Apparent |  |
| EA+ | Power (Energy) Imported Active |  |
| ER L+ | Power (Energy) Imported Reactive Inductive |  |
| ER C+ | Power (Energy) Imported Reactive Capacitive |  |
| ES+ | Power (Energy) Imported Apparent |  |
| EA- | Power (Energy) Exported Active |  |
| ER L- | Power (Energy) Exported Reactive Inductive |  |
| ER C- | Power (Energy) Exported Reactive Capacitive |  |
| ES- | Power (Energy) Exported Apparent |  |
| NOTE n .10 |  |  |
| YES | Referred to CT primary |  |
| NO | Referred to CT se | ondary |

## ALARM SETUP EXAMPLE

To ensure that the exit "DIGITAL OUT 1" remains excited for the alarm duration (latching) when average active power (MEAS 344) exceeds the value of 100 kW , hysteresis, $5 \%$ and latency of 5 seconds set the parameters such as table:

| ALARM 1 / A | MODE (note n.3) | NORMAL,UNBAL\%,UNBAL,3-OF-3,1-OF-3 | NORMAL |
| :--- | :--- | :--- | ---: |
|  | TYPE (note n.4) | MAX, MIN | MAX |
|  | MEAS (note n.5) | Controlled measure. See table n.1 for register <br> selection. | 344 |
|  | THRE (note n.5) | Threshold value | 100000 |
| ALARM 1 / B | HYST | $1 . .99$ (\%) | 5 |
|  | DELAY | $1 . .99$ (seconds) | 5 |
|  | AVG (note n.6) | $1 . .99$ (seconds) | 1 |
|  | OUT (note $n .7)$ | NORMAL, HOLD | NORMAL |
| DIGITAL OUT 1 | FUNCTION | S0-1,ALARM,REMOTE | ALARM |
|  | POLARITY | N.O.,N.C. | NO |
|  | MODE | NORMAL,PULSE, | NORMAL |

## VOLTAGE CONNECTION

Use cables with max cross-section of $2,5 \mathrm{~mm}^{2}$ if stranded, $4 \mathrm{~mm}^{2}$ if rigid and connect them to the clamps marked VOLTAGE INPUT on the instrument according to the applicable diagrams that follow.

## PHASE SEQUENCE

L123
L132 Correct sequence
Incorrect sequence

Please consider that:

- only the voltage sequence is detected;
- the detection considers the hypothesis that the tensions are sinusoidal (or at least slightly distorted) and belonging to a symmetrical (or almost) triad;
- independently from the insertion $3 \mathrm{~W} / 4 \mathrm{~W}$, it is considered exclusively the sign of voltage 2 and 3 in the zero-crossing of voltage for phase 1 - it is not calculated the effective phase of the voltage fundamentals;
- the phase sequence is indicated with the "L123", "L132", "L-" symbols next to frequency, in the voltages displaying page.
It is assumed:
L 1 is the voltage with phase $0^{\circ}$
L2 is the voltage with phase $240^{\circ}$ (in delay to L1)
L3 is the voltage with phase $120^{\circ}$ (in advance to L1)

## MESSAGE "CFG ERROR"

During the set up operation a "CFG ERROR" message could appear. This means that some wrong parameters are typed. To restore the factory default settings use the following procedure (RESTORE FACTORY SETTING):

Once this procedure is done the meter is configured with its factory default settings. Logged data for counters, energy and timer will remain after the restore operation.
akse srl Via Aldo Moro, 3942124 Reggio Emilia Italy
Tel. +390522924244 Fax +39 0522924245 info@akse.it www.akse.it P.I. 01544980350 R.E.A. 194296 Cap. Soc. Euro 85.800,00 i.v.

## CURRENT CONNECTION

Use only the CT's provided with the instrument. Connect the CT outputs to the terminals marked I1, I2, I3 according to the applicable diagrams that follow.

| 1P2W / 2P2W | 3P3W |
| :---: | :--- |
| 3P4W-B / 3P4W-B-3U |  |

Note: Scrupulously respect the matching of phase between the voltage signals and current signals. Failure to comply with this correspondence and connection diagrams gives rise to measurement errors. Do not extend the length of the CT's wires.

## POWER SUPPLY

The instrument is equipped with a separate power supply. The power supply terminals are numbered (17) and (18). Use cables with max cross-section of $2,5 \mathrm{~mm}^{2}$ if stranded, $4 \mathrm{~mm}^{2}$ if rigid.

POWER SUPPLY

230/240Vac +/-10\% 50/60Hz

## SERIAL LINE CONNECTION

| RS485 |  |
| :--- | ---: |
| Address | 27 |
| Baud rate | 38400 |
| Parity | None |
| Bit of Stop | 2 |

Max cable length: 1000 meters.
