# **FEMTO D4 DC**

## **INSTALLATION GUIDE**

### **COPYRIGHT**

Electrex is a trademark of Akse S.r.l. All rights reserved.

It is forbidden to duplicate, adapt, transcript this document without Akse written authorization, except when regulated accordingly by the Copyright Laws.

#### WARRANTY

This product is covered by a warranty against material and manufacturing defects for a 24 months period from the manufacturing date.

The warranty does not cover the defects that are due to:

- · Negligent and improper use
- Failures caused by atmospheric hazards
- Acts of vandalism
- Wear out of materials
- Firmware upgrades

Akse reserves the right, at its discretion, to repair or substitute the faulty products

The warranty is not applicable to the products that will result defective in consequence of a negligent and improper use or an operating procedure not contemplated in this manual.

### **RETURN AND REPAIR FORMALITIES**

Akse accepts the return of instruments for repair only when authorized in advance. The transport costs are at customer charge.

### **RE-SHIPPING OF REPAIRED PRODUCT**

The terms for re-shipment of repaired products are ex-works, i.e. the transport costs are at customer charge.

Products returned as detective but found to be perfectly working by our laboratories, will be charged a flat fee to account for checking and testing time irrespective of the warranty terms.

#### **SAFETY**

This instrument was manufactured and tested in compliance with IEC 61010-1 CAT III-300V class 2 standards for exercise voltages up to 300 Vac rms phase to neutral.

In order to maintain this condition and to ensure safe operation, the user must comply with

In order to maintain this condition and to ensure safe operation, the user must comply with the indications and markings contained in the following instructions:

- When the instrument is received, before starting its installation, check that it is intact and no damage occurred during transport.
- Before mounting, ensure that the instrument operating voltages and the mains voltage are compatible then proceed with the installation.

• The instrument power supply needs no earth connection.

- The instrument is not equipped with a power supply fuse; a suitable external protection fuse must be foreseen by the contractor.
- Maintenance and/or repair must be carried out only by qualified, authorized personnel
- If there is ever the suspicion that safe operation is no longer possible, the instrument must be taken out of service and precautions taken againstits accidental use.
- Operation is no longer safe when:
- 1) There is clearly visible damage.
- 2) The instrument no longer functions.
- 3) After lengthy storage in unfavorable conditions.
- 4) After serious damage occurred during transport

The instruments must be installed in respect of all the local regulations.

### **OPERATOR SAFETY**

**Warning:** Failure to observe the following instructions may lead to a serious danger of death.

- During normal operation dangerous voltages can occur on instrument terminals and on voltage and current transformers. Energized voltage and current transformers may generate lethal voltages. Follow carefully the standard safety precautions while carrying out any installation or service operation.
- The terminals of the instrument must not be accessible by the user after the installation.
   The user should only be allowed to access the instrument front panel where the display is located.
- Do not use the digital outputs for protection functions nor for power limitation functions.
   The instrument is suitable only for secondary protection functions.
- The instrument must be protected by a breaking device capable of interrupting both the power supply and the measurement terminals. It must be easily reachable by the operator and well identified as instrument cut-off device.
- The instrument and its connections must be carefully protected against short-circuit.

**Precautions:** Failure to respect the following instructions may irreversibly damage to the instrument.

- The instrument is equipped with PTC current limiting device but a suitable external protection fuse should be foreseen by the contractor.
- The outputs and the options operate at low voltage level; they cannot be powered by any unspecified external voltage.
- The application of currents not compatible with the current inputs levels will damage to the instrument.

Further documentation may be downloaded from our web site www.electrex.it.

This document is owned by the company AKSE that reserves all rights.

## **DECLARATION OF CONFORMITY**

Akse hereby declares that its range of products complies with the following directives EMC 89/336/EEC 73/23CE 93/68 CE and complies with the following product's standard CEI EN 61326 – IEC 61326 CEI EN 61010 – IEC 61010.

The product has been tested in the typical wiring configuration and with peripherals conforming to the EMC directive and the LV directive.

## TABLE n.1 (ModBus Registers for alarm configuration)

REGISTER	DESCRIPTION	SYMBOL	UNITS
220	Voltage Amplitude	U	[V]
232	Current Amplitude	I	[A]
240	Active Power ( Imp/ Exp)	P	[W]
332	Current AVG	I AVG	[A]
344	Total imported active power, AVG	P Imp AVG	[W]
352	Total exported active power, AVG	P Exp AVG	[W]
376	External Pulse Counter, With Weight, Total counter or Tariff T1	CNT1 S	
384	External Pulse Counter, With Weight, Partial Counter or Tariff T2	CNT1 P	

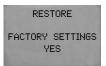

Note n.1	
POWERS	Integration time of the average value (AVG) and peak value (MD) for
	power (from 1 to 60 minutes)
CURRENTS	Integration time of the average value (AVG) and peak value (MD) for
00	
	current (from 1 to 60 minutes)
Note n.2	
NORMALE	Classic Alarm with reference to a fixed threshold or to maximum an
	minimum delay and applicable hysteresis. "AVG" parameter is not used.
DERIV	"THRE" parameter becomes a % value, "AVG" parameter is used. Th
	instant value applied to the alarm on "MEAS" is compared with its valu
	mediated obtained on the basis of the time set on "AVG". When the
	instantaneous value combined alarm differs in more (setting "Max") or les
	(setting "MIN") from the average value (" AVG ") of the percentage set o
	"THRE" the alarm goes on. With delay and applicable hysteresis.
Note n.3	
MAX	Alarm setting in excess compared with the established conditions.
MIN	Alarm setting in decrease compared with the established conditions.
Note n.4	
MEAS	indicates which register (and thus measure) the alarm is related.
	See table n.1 input register.
THRE	Alarm threshold in absolute value, with the exception made for "DERIV"
	in which the value inserted becomes a percentage.
Note n.5	The second secon
AVG	Parameter to be used only in "DERIV" mode. Is the duration of the refe-
	rence (in seconds) used to create a reference value for the istantaneous
	readings.
Note n.6	ireaulings.
NORMAL	Physical output of the alarm excited during the duration of the alarm. It
NORIVIAL	
	restores automatically
HOLD	Output remains excited until manual reset made via Modbus
PULSE-L	Output generate a 500ms impulse when the alarm goes on.
PULSE-S	Output generate a 100ms impulse when the alarm goes on.
Note n.7	
PULSE	Enables exit function as impulsive
ALARM	Enables exit function as alarm
REMOTE	Enables function output via protocol Modbus
NO	Normally open
NC	Normally closed
Note n.8	
P-IMP	Imported Active Power (Energy)
P-EXP	Exported Active Power (Energy)
Note n.9	, , , , , , , , , , , , , , , , , , ,
YES	Referred to SHUNT primary
NO.	Referred to SHUNT secondary
Note n.10	
ALLARME 1	Alarm related to the physical output: DIGITAL OUT 1 (DO1, terminal 8)
ALLARME 2	Alarm related to the physical output: DIGITAL OUT 1 (DO1, terminal 9)
ALLARME 3	Only MODBUS alarm
ALLARIVIE 3 ALLARME 4	Only MODBUS alarm
	TOTAL MATERIAL AND A SIGNAL

## **MESSAGE "CFG ERROR"**

During the set up operation a "CFG ERROR" message could appear. This means that some wrong parameters are typed. To restore the factory default settings use the following procedure (RESTORE FACTORY SETTING) seguire la seguente procedura:

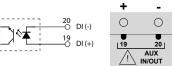

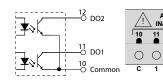

Once this procedure is done the meter is configured with its factory default settings. Stored data will remain after the restore operation.

### **DIGITAL INPUTS AND OUTPUTS CONNECTION**

(only for the version PFA6471-12)

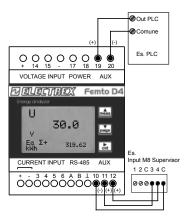

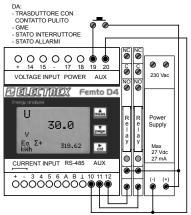

Digital Inputs	
Supply voltage (external):	from 10 to 30 Vdc
Current consumption:	from 2 to 10mA
Max. count frequency	10 or 100Hz
N.B. For gas meters a galvan needed per ATEX standards	ic separation is

Digital outputs (optocoupled NPN transistor type for DIN 43864)	
Maximum applicable voltage:	27 Vdc
Maximum switchable current:	27 mA

## **INPUT & OUTPUTS CONNECTION EXAMPLE**

## **ALARM SET UP EXAMPLE**

To ensure that the exit "digital out 1" remain excited for the alarm duration (latching) when average active power (MEAS 344) exceeds the value of 100 kW, hysteresis, 5% and latency of 5 seconds set the parameters such as table:

	MODE (note n.1)	NORMAL, DERIV	NORMAL
	TYPE (note n.2)	MAX, MIN	MAX
ALARM 1 / A	MEAS (note n.3)	Controlled measure. See table n.1 for register	344
		selection	
	THRE (note n.3)	Threshold value	100000
	HYST	1100 (%)	5
ALARM 1 / B	DELAY	199 (seconds)	5
ALAKWI 1 / B	AVG (note n.4)	199 (seconds)	1
	OUT (note n.5)	Normal, Hold, Pulse-L, Pulse-S	NORMAL
DIGITAL OUT 1	MODE	PULSE, ALARM, REMOTE	ALARM
DIGITAL OUT 1	POLARITY	NO, NC	NO

To ensure that the exit "digital out 2" remain excited for the alarm duration (latching) when average active power (MEAS 344) goes down the value of 90 kW, hysteresis, 5% and latency of 5 seconds set the parameters such as table:

ALARM 2 / A	MODE (note n.1)	NORMAL, DERIV	NORMAL
	TYPE (note n.2)	MAX, MIN	MIN
	MEAS (note n.3)	Controlled measure. See table n.1 for register	344
		selection	
	THRE (note n.3)	Threshold value	90000
ALARM 2 / B	HYST	1100 (%)	5
	DELAY	199 (seconds)	5
	AVG (note n.4)	199 (seconds)	1
	OUT (note n.5)	Normal, Hold, Pulse-L, Pulse-S	NORMAL
DIGITAL OUT 2	MODE	PULSE, ALARM, REMOTE	ALARM
	POLARITY	NO, NC	NO

## **WIRING FOR VOLTAGE AND CURRENT**

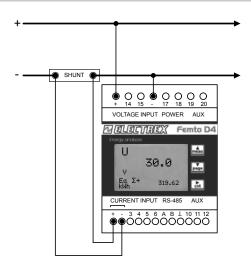

#### Voltage connection:

Use cables with max cross-section of 2,5 mm<sup>2</sup> if stranded 4 mm<sup>2</sup> if rigid and connect them to the terminals marked VOLTAGE INPUT on the instrument according to the applicable diagrams that follow.

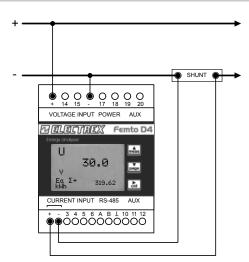

### Connessioni amperometriche

Use SHUNT with adequate primary and 60 o 100 mV as secondary rate. Connect the SHUNT to the terminals marked I1 (S1 e S2) (current input) according to the applicable diagrams that follow.

### SHUNT CONNECTED BEFORE

## **SHUNT CONNECTED AFTER**

## POWER SUPPLY AND SERIAL LINE CONNECTION

The instrument is fitted with a separate power supply. The power supply terminals are numbered (17) and (18). Use cables with max cross-section of 2,5 mm² if stranded, 4 mm² if rigid.
