

## TECHNICAL NOTE

### Minimum specifications and technical requirements for the Energy Brain software protection keys

#### ***Minimum specifications for installing Energy Brain software***

##### *Minimum hardware requirements:*

2 GHz processor, 4 GB of RAM, 500GB HD (at least 50 GB expandable if virtual server), USB port (if version with USB hardware type protection key HK), network card.

##### *System software requirements:*

Windows 10, Windows 7 SP1, Windows Server 2008, Windows Server 2012, Windows Server 2016, Windows Server 2019.

##### *Virtual servers:*

The same hardware and software requirements as above apply.

#### ***Technical requirements hardware (HK) or software (SK) Energy Brain protection key***

##### *USB hardware type protection key (HK):*

It is necessary to verify that a physical USB port is available or, alternatively, a remote key tool (e.g. anywhere digi usb).

##### *Software type protection key (SK):*

It is necessary to verify that the machine hosting the Energy Brain software is never transferred from one hardware to another (PC, non-clustered machine or physical server).

If, following a move, the license will be blocked, it will be necessary to unlock it to reuse the software, at an additional cost to be paid by the user.
