

Energy Brain Personal Report

Option of Energy Brain

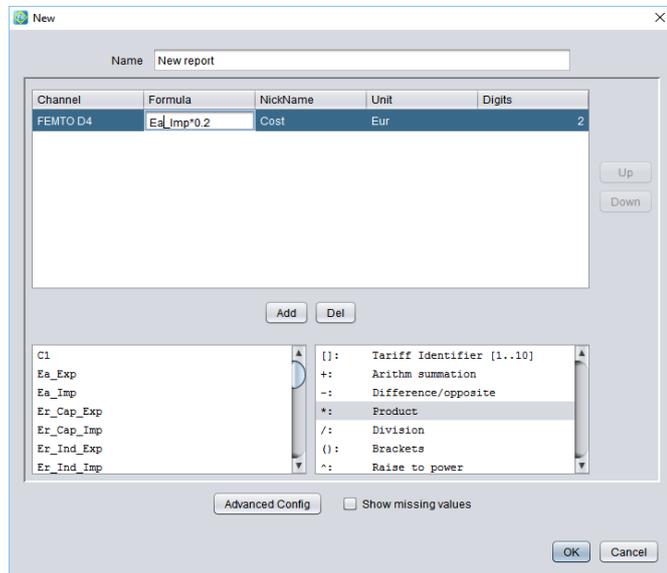

Energy Brain Personal Report is an option of Energy Brain software conceived for those who want to automate the sending of energy reporting, such as energy consultants. It prepares and automatically sends periodic reports (daily, weekly, monthly and annual) based on data collected in the database of Energy Brain. The report exported as Excel/CSV file (containing also data from different channels and locations) is then available for the final layout using ad hoc templates containing logos, graphics, images, etc. The report exported as an Excel/CSV file can also be included as an attachment in an e-mail or saved automatically in a remote FTP location.

Report configuration

Using the specific configuration window it is possible to select the channels and the measures that will be included in the report, modify the columns titles, insert the units label and define the number of decimals displayed.

In addition it is possible to apply mathematical formulas to the measurements included (e.g. convert kWh in Euro). The formulas may refer also to data coming from different Locations.

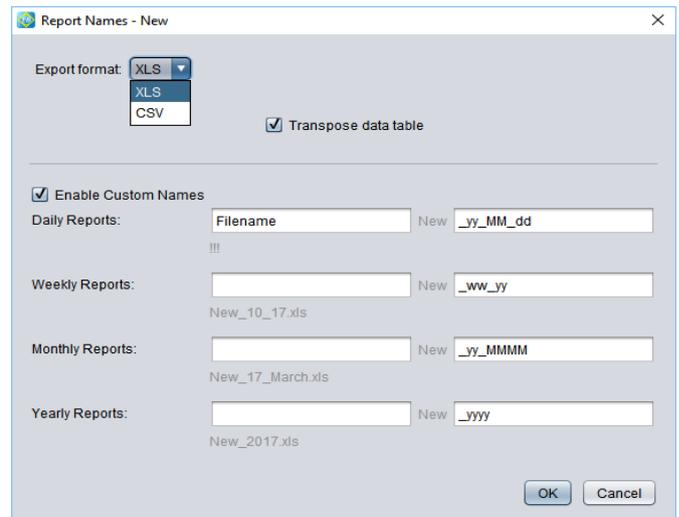

The user may configure the software in order to use pre-edited, customized templates (Excel files) including graphs, tables, logos and other custom elements. The customized templates are populated with data from the Energy Brains database automatically. So the templates may be customized considering the end user (e.g. the accounting office will receive every month the total consumptions, the maintenance team the data on Power Quality, etc.).

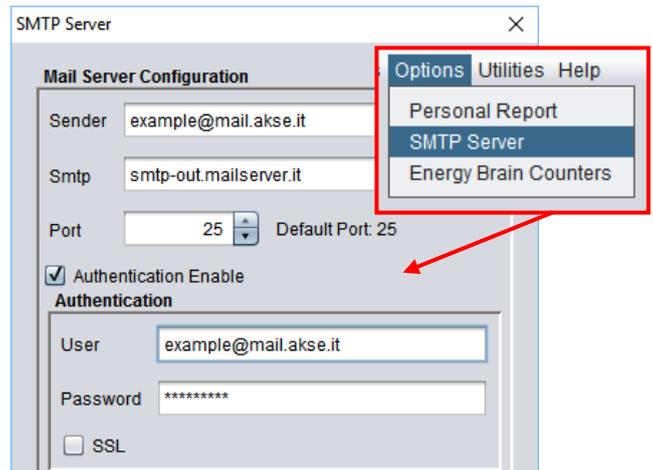

The format of the generated report file may be an XLS (Excel) or CSV. It is possible to edit automatically the file's

name considering the period-date to which the data of the report refer (e.g. Branch_One_2015_01).

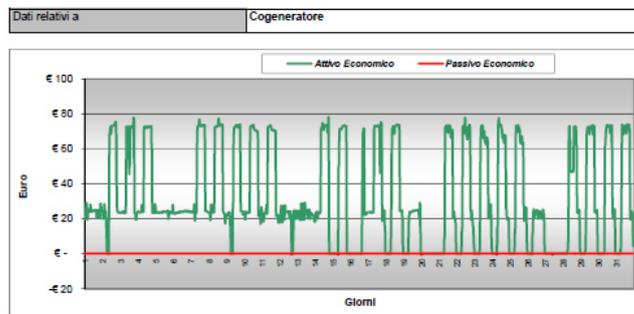

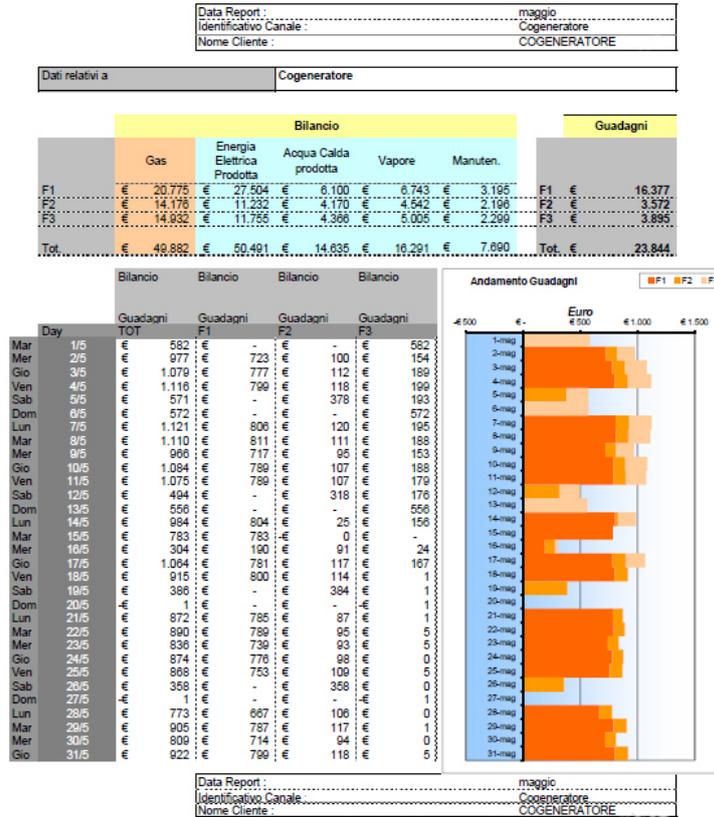

The period-date reference can be positioned before or after the file's name (e.g. 2015_01_24_Trafo_2).

In order to activate the automatic sending of the reports as an e-mail attachment it is necessary to configure the e-mail server (SMTP port editable and SSL protection).

Personal Report example of the energy balance report of a CHP (natural gas, energy produced, hot water produced, steam and maintenance) including the revenue calculation:

Personal Report example analyzing a painting department:

Minimum System requirements

Minimum hardware requirements: PC Processor 2 GHz, 4GB, 500GB HD, USB port, network interface card, Monitor VGA 1024x768.

Software Requirements: Windows 10, Windows 8.1, Windows 7 SP1 (32 and 64 bit), Windows XP (32 and 64 bit), Windows Vista SP2 (32 and 64 bit), Windows Server 2008 (32 and 64 bit), Windows Server 2012 (64 bit).

Virtual servers: same as the requirements above. For the Energy Brain versions using the hardware protection USB dongle key, must be verified the availability of a physical USB port.

For more info please refer to the specific datasheet on Energy Brian software.

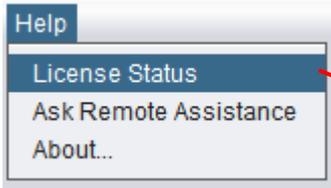

Order codes

Type	Code
Option Energy Brain Personal Report	PFSW400-00

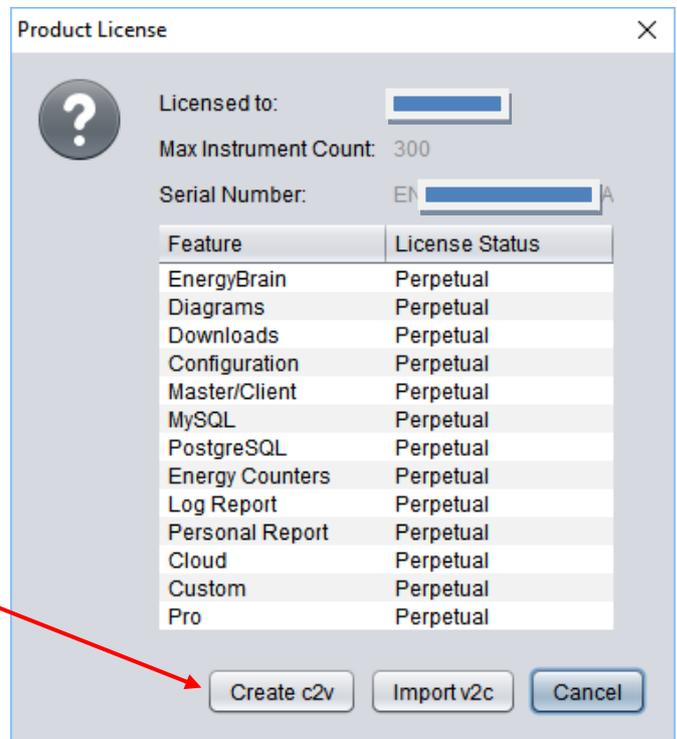

How to order

The Personal Report option can be activated also after the initial installation of the software Energy brain.

From the top menu bar select ...

License Status which leads to the window allowing to generate the "ordering file – c2v" and the "remote activation file – v2c".
