

Energy Brain Counters

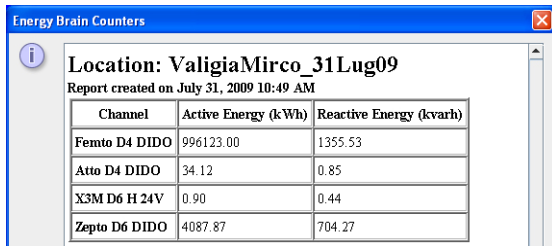

Energy Brain Counters is a software (or an option of Energy Brain) that generate a report with the value of the energy meters of each location. The report is exportable in HTML format and importable directly in a Excel file. Using the Skeduled Task of Windows XP or Vista it is possible to setup an automatic agenda to create periodical report, for example monthly report. This functionality is particularly useful for administrators to remotely download and visualize the counters value of the meters installed for example in a condominium, or in an harbour, or in a hotel, etc.

Functioning

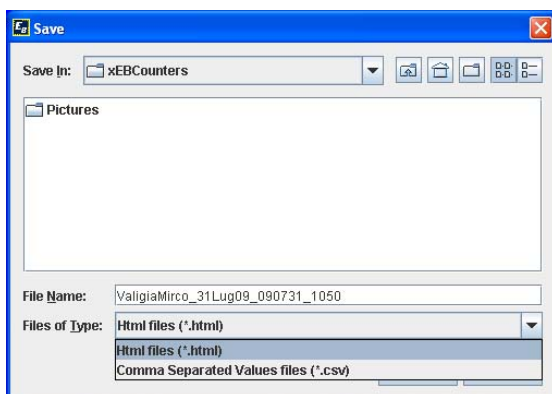

From *Configuration* or *Option menu* select *Energy Brain Counters*. It appear Appare the selection window of the location.

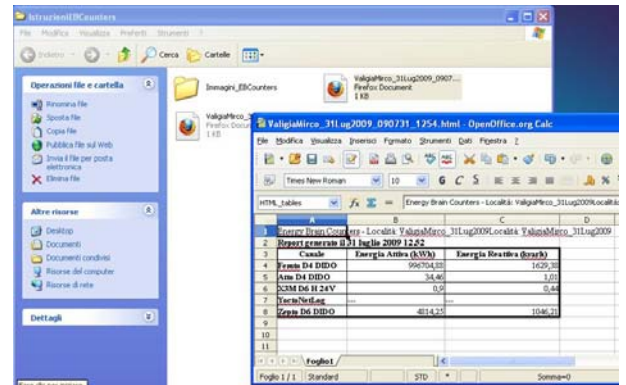

Selecting a location will appear a window with an active and reactive energy report of all the instruments connected.

Clicking to Save will be created a report in HTML.

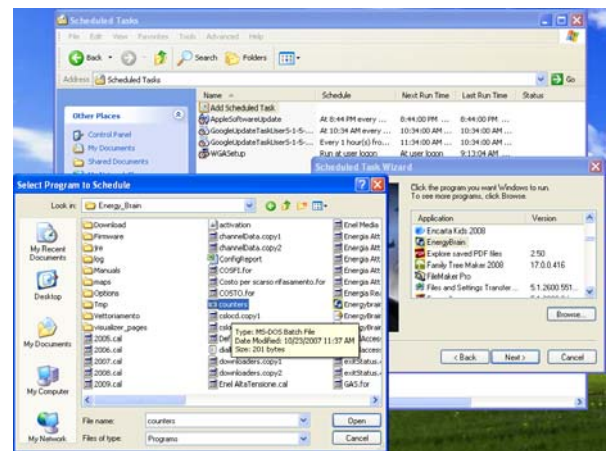

This HTML report can be imported directly in a file of Excel (just drag the HTML icon on an open sheet of Excel).

Scheduled Tasks

From *Start / Control Panel / Scheduled Tasks* (with Vista is a different path) select with *Browse* the *Counter.bat* file inside the folder of Energy Brain. Then follow the procedure to setup the agenda (frequency, for example monthly, and date/time) for the automatic execution of Counters with PC turn on.
